Introduction

This report outlines the production-level software development tasks assigned to our interns at Bluestock Fintech. The project involves developing an IPO web application and design REST API for the Bluestock website/app and our clients' websites/apps. These tasks are designed to enhance the interns' practical

knowledge and contribute to our ongoing projects. Each task aligns with our company's goals and the interns' skills and career aspirations.

Objective:

Develop a web application and REST API that provides IPO-related information to the public. The application will display information such as company logo, name, price band, opening and closing dates, issue size, issue type, listing date, status, IPO price, listing price, listing gain, current market price (CMP), and current return. Additionally, it will include downloadable RHP and DRHP PDFs.

Data Source: Add dummy IPO Data in database which shown on upcoming ipo webpage (refer ui ux design)

Software Requirements

Backend:

- SDK: Python (Version 3.12.3)
- Framework: Django (Version 5.0.6) `pip install Django`
- API: Django REST Framework (Version 3.15.1) `pip install djangorestframework`
- Tools: Postman for API testing, Git & GitHub for version control

Frontend:

- Technologies: HTML, CSS, plain JavaScript (no NodeJS)
- Framework: Bootstrap 5 (via CDN link)
- Database: PostgreSQL
- IDE: Visual Studio Code (VS Code)

1. Prerequisites

Interns are required to familiarize themselves with the following concepts before starting the project:

What is Stock Market? - https://youtu.be/gWrR5qPEmWE?si=QAf19b i-uSMn3vV

PROJECT FEATURES

Public User Interface:

Home page: List of IPOs (upcoming, ongoing, listed)

- IPO detail page with full IPO data
- Download RHP & DRHP PDFs
- Search & Filter by status or name

Admin Panel:

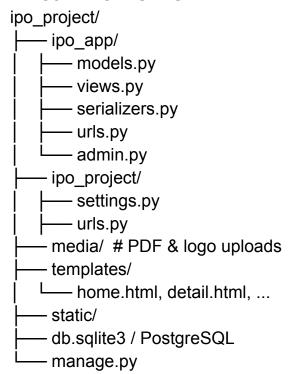

- Login-secured interface
- Create, update, delete IPO data
- Upload PDF files (RHP, DRHP)
- Manage logos and all IPO fields

API:

- /api/ipo/ List IPOs
- /api/ipo/<id>/ IPO details
- Filtering, search & sort support

This information will be available on both the Bluestock website/app and clients' websites/apps.

PROJECT STRUCTURE

Development Overview

Important Notes:-

- This is a production-level project; therefore, write quality code and test features regularly.
- Apply necessary security rules to ensure data protection and integrity.
- Utilize ChatGPT for testing code, writing features, and designing the database schema.

9.Deadlines

Date	Work Status
-	Complete All Frontend (Client Side, Admin Dashboard)
-	Complete Entire Project

//Deadline for entire project submission updated in workspace

Submission Guidelines

- Do not commit buggy or error-prone code.
- Thoroughly test your code on your local machine before committing.
- Commit changes to the main branch and push them.

System Design: IPO Web Application & REST API By Bluestock Fintech

Django Models

```
from django.db import models
```

```
class IPO(models.Model):
  STATUS_CHOICES = [
    ('upcoming', 'Upcoming'),
    ('ongoing', 'Ongoing'),
    ('listed', 'Listed'),
  ]
  company_name = models.CharField(max_length=255)
  logo = models.ImageField(upload_to='logos/')
  price band = models.CharField(max length=100)
  open date = models.DateField()
  close_date = models.DateField()
  issue_size = models.CharField(max_length=100)
  issue_type = models.CharField(max_length=100)
  listing date = models.DateField(null=True, blank=True)
  status = models.CharField(max_length=20, choices=STATUS_CHOICES)
  ipo_price = models.FloatField(null=True, blank=True)
```

```
listing price = models.FloatField(null=True, blank=True)
current market price = models.FloatField(null=True, blank=True)
rhp pdf = models.FileField(upload to='docs/', null=True, blank=True)
drhp_pdf = models.FileField(upload_to='docs/', null=True, blank=True)
@property
def listing gain(self):
  if self.ipo_price and self.listing_price:
     return round(((self.listing price - self.ipo price) / self.ipo price) * 100, 2)
  return None
@property
def current return(self):
  if self.ipo_price and self.current_market_price:
     return round(((self.current market price - self.ipo price) / self.ipo price) * 100, 2)
  return None
def __str__(self):
  return self.company name
```

ER Diagram Description:

Entities and Attributes:

- 1. Companies
 - company_id: INT (Primary Key, Auto-Increment)
 - company_name: VARCHAR(255) (Not Null)
 - company_logo: VARCHAR(255) (URL or file path)

2. **IPOs**

- o **ipo id**: INT (Primary Key, Auto-Increment)
- company_id: INT (Foreign Key referencing Companies.company id)
- o price_band: VARCHAR(50)
- open_date: DATE
- o close_date: DATE
- o issue_size: VARCHAR(100)
- issue_type: VARCHAR(50)
- o listing date: DATE
- status: ENUM('Upcoming', 'Open', 'Closed', 'Listed')
- o ipo price: DECIMAL(10,2)
- listing_price: DECIMAL(10,2)
- o listing_gain: DECIMAL(5,2)
- current_market_price: DECIMAL(10,2)

current_return: DECIMAL(5,2)

3. **Documents**

- document_id: INT (Primary Key, Auto-Increment)
- ipo_id: INT (Foreign Key referencing IPOs.ipo_id)
- o **rhp_pdf**: VARCHAR(255) (URL or file path)
- o **drhp pdf**: VARCHAR(255) (URL or file path)

Relationships:

1. Companies to IPOs

- Type: One-to-Many
- Description: One company can have multiple IPOs, but each IPO is associated with exactly one company.
- Foreign Key: company_id in IPOs references company_id in Companies.
- On Delete: CASCADE (if a company is deleted, all related IPOs are deleted).

2. IPOs to Documents

- **Type**: One-to-Many
- Description: One IPO can have multiple documents, but each document is associated with exactly one IPO.
- o Foreign Key: ipo_id in Documents references ipo_id in IPOs.
- On Delete: CASCADE (if an IPO is deleted, all related documents are deleted).

```
[Companies] --(1:N)-- [IPOs] --(1:N)-- [Documents]
